

Using your DS series printer driver for the Macintosh computer

After installing your driver, you can use the DS40, DS80 or RX1 to print from your computer.

Note: the printer options screen may change slightly depending on the program from which you are printing. Graphic design programs like *Photoshop* or *Illustrator* may have extra settings which are not included in the examples below.

Attention: the examples that follow show settings for the DS80 printer. The DS40 and RX1 printer control panels are the same, but will use different sizes for the paper.

Exploring the control panel

Letter	Description	Letter	Description
A	Select Printer*	H	Cut Mode
B	Preset Selection	I	Enable Adjustments: Expert Mode
C	Paper Size	K	Brightness
D	Paper Orientation	L	Contrast
E	Printer Settings	M	Gamma
F	Overcoat type: glossy/matte	N	Sharpness
G	Resolution: 300 DPI recommended		

*selecting a different printer, such as the DS80 or RX1, will change some of the options (paper size) accordingly.

By clicking on the **Color** button, you can change the controls from **Image** to controls to Color controls.

The screenshot shows the DNP printer control interface. On the left is a preview of a colorful street scene. To the right of the preview are navigation controls (back, forward, 1 of 1). Further right are settings for Printer (DNP DS-40), Presets (Default Settings), Copies (1), Pages (All), Paper Size (5 x 7, 5.16 by 7.13 inches), and Orientation (Portrait). Below these is the 'DNP Printer Features' section with tabs for Finish (Glossy, Matte), Resolution (300 DPI, 600 DPI), and Cut Operation (Normal, 2 Inch). There is an 'Enable Adjustments' checkbox. Below this is a color adjustment panel with 'Image' and 'Color' tabs. The 'Color' tab is active, showing sliders for Saturation (0), Red (0), Green (0), and Blue (0). Each slider has a color swatch to its right. A 'Reset to Defaults' button is at the bottom of the color panel. At the very bottom of the interface are buttons for '?', 'PDF', 'Hide Details', 'Cancel', and 'Print'.
